

LINKEDIN AUDIT & GROWTH PLAN

SpeechYou

A review of the current LinkedIn company page, how it compares with competitors, and a plan for what to fix and what to post.

Company page linkedin.com/company/speechyou

Website speechyou.com

Category Software Development

Report date 1 September 2026

SECTION 01

Current account audit

Official current account: [linkedin.com/company/speechyou](https://www.linkedin.com/company/speechyou)

Metric	Current observation	What it means
Followers	1	Almost no unpaid reach.
Linked employees	0	No public team members to make the page look real.
Posts	0	LinkedIn openly shows "No posts yet."
Category	Software Development	Correct broad category.
Company size	2–10 employees	The stated size does not match zero linked employees.
Founded year shown	2025	Likely the product / page date, not the 2021 legal entity.

SECTION 02

Competitor comparison

LinkedIn audience size of the closest meeting-AI and transcription products.

Company	LinkedIn audience	Page link
Fireflies.ai	~49.1K	linkedin.com/company/fireflies-inc/
Avoma	~45.3K	linkedin.com/company/avoma/
tl;dv	~38.0K	linkedin.com/company/tl-dv/
Otter.ai	~35.8K	linkedin.com/company/otter-ai/
Fellow	~13.5K	linkedin.com/company/fellow-ai/
MeetGeek	~11.0K	linkedin.com/company/meetgeek-ai/
SpeechYou	1	linkedin.com/company/speechyou/

SECTION 03

What to fix before posting at scale

Groundwork that has to be in place first, so that traffic from posts does not land on a page that cannot convert it.

Requirement	Action	Why it matters for LinkedIn
Company-page basics	Rewrite the About section, add a banner that states the value, link real employees, and feature Claude MCP or one strongest demo.	Every post sends people to the profile. It must answer “what is this and why trust it?”
Pricing / trial clarity	Make the website, App Store, checkout and terms all say the same thing.	New visitors will compare the offer before they try it.
Backing up claims	Define which languages are covered, in what conditions accuracy is measured, how security is worded, and how data is handled.	Avoid eye-catching claims that fall apart in the comments or in buyer questions.
Customer proof	Gather quotes or case studies you have permission to use, with a name attached, a before number and an after number.	Replace vague social proof with proof worth sharing.
Traffic tracking	Use tracked links (UTM) and a dedicated LinkedIn landing page for every major campaign.	Measure traffic and trials, not just likes and comments.

SECTION 04

Primary audience

Founders, product leaders and consultants in small distributed teams who already use Claude, ChatGPT, Notion, Slack, Zoom or Google Meet.

Why this audience first	What they record	SpeechYou outcome to emphasise
They have a high volume of calls, interviews, decisions and voice notes.	Customer discovery, project meetings, client calls, founder notes.	Find a decision, customer objection or task without rewatching or relistening.
They are active on LinkedIn and likely to share productivity workflows.	Daily meetings and informal voice ideas.	Claude can work with their own conversation history.
They face fewer legal and security approval hurdles than large regulated buyers.	Internal team notes, client calls, user interviews.	Fast time to value, and simple browser-first capture.

SECTION 05

Content mix

How the posting effort should be split, and what job each type of post does.

Pillar	Share	Role	Best format
Product workflows and demos	30%	Prove the product is real and useful.	20–40 second screen recording, marked-up screenshot, before/after carousel.
Role-specific workflows	25%	Give one clear type of buyer a reason to care.	Checklist, workflow diagram, short story carousel.
Founder / operator point of view	15%	Build human trust and own the topic.	Text post with one observation from real experience, and a simple visual if useful.
Customer proof and evidence	15%	Build credibility and buying intent.	Customer video, screenshot you have permission to share, mini case study.
Trust, privacy, language and data	10%	Answer worries and questions about meeting data.	FAQ carousel, policy explainer, workflow plus the limits.
Culture / light brand / community	5%	Keep the feed human without losing focus.	Behind-the-scenes post, relatable meeting-pain humour.

SECTION 06

High-potential post types

Eight repeatable post formats, with the angle each one should take.

Post type	What it should show	Example angle (not final copy)
Workflow demo	One job from start to finish.	A founder turns five voice notes into a weekly update with decisions, owners and open questions.
Claude retrieval demo	The exact output a user gets, including links back to the source notes.	Find every time a customer mentioned pricing across last month's calls.
Role playbook	One type of buyer's repeating pain, and a process they can repeat.	How a product manager turns five user interviews into a pattern report.
Founder viewpoint	A strong opinion based on real experience.	Meeting transcription is a feature. Remembering what the meeting taught you is the product.
Product release	Problem, real demo, outcome, simple ask.	New speaker labelling: what it fixes in a research interview with one shared microphone.

Post type	What it should show	Example angle (not final copy)
Trust explainer	Plain-language documented facts, plus the limits where relevant.	What happens when you delete a recording, and what teams should do about consent.
Customer evidence	A real named workflow and a measurable result.	How a consulting team stopped manually summarising client calls.
Integration moment	A recognisable partner or workflow link.	Claude can now use your spoken notes as context, instead of relying on copy-paste.

SECTION 07

Format rules

Rules that apply to every post, whatever the pillar.

VIDEO

Show the outcome in the first three seconds. Captions are required. One use case per clip.

CAROUSEL

One problem per document, 5–8 slides, and a concrete takeaway on the final slide.

TEXT POST

Lead with a specific work problem or a contrarian observation, then explain how SpeechYou changes it.

CALL TO ACTION

Ask for a specific response — a workflow question, a demo view or a guide download — not a generic “Try us today.”

EXTERNAL LINKS

Use tracked links. Test putting the resource link in a pinned first comment when the post performs better without a link in the body.

SECTION 08

First eight posts SpeechYou could publish

A starting sequence that moves from explaining the product, to showing it, to proving it.

1 Launch narrative

“SpeechYou is building AI memory for spoken work.” Explain record → transcript → Claude recall.

2 Demo

“Ask Claude to find every time a customer mentioned pricing.” Show the result with links back to the source.

3 Workflow

“Turn a week of founder voice notes into a Friday stand-up update.”

4 Multilingual use case

“How a distributed team shares one meeting in everyone’s working language.”

5 Founder point of view

“Why copying transcripts into AI chat is a broken workflow.”

6 Proof post

A named customer story, used with their permission, showing the before number and the measurable result.

7

Trust post

Explain how audio is kept, how it is deleted, who can access it, and which outside AI services handle the data — with exact documentation.

8

Integration post

Explain why MCP is useful in normal business language, not protocol language.
